Animal Rights Activism and the Constitution: Are Ag-Gag Laws Justifiable Limits?

Abstract

It is a troubling time to be an animal rights activist in Canada. Recently, Alberta adopted legislation to create harsh penalties for trespassing onto private property, for obtaining permission to enter private property based on false pretences, and for interfering with vehicles on public highways. These laws relate to agricultural lands, to private property generally, and, where roads are concerned, to public property. Ontario has adopted similar legislation aimed specifically at agricultural property. The legislation in both provinces purports to protect the security of farmers, their families, and rural property owners generally, as well as the safety of the food system, by preventing contamination of farmed animals by trespassers and those who would interfere with farmed animals in transport.

Animal Rights Activism and the Constitution: Are Ag-Gag Laws Justifiable Limits?

JODI LAZARE*

It is a troubling time to be an animal rights activist in Canada. Recently, Alberta adopted legislation to create harsh penalties for trespassing onto private property, for obtaining permission to enter private property based on false pretences, and for interfering with vehicles on public highways. These laws relate to agricultural lands, to private property generally, and, where roads are concerned, to public property. Ontario has adopted similar legislation aimed specifically at agricultural property. The legislation in both provinces purports to protect the security of farmers, their families, and rural property owners generally, as well as the safety of the food system, by preventing contamination of farmed animals by trespassers and those who would interfere with farmed animals in transport.

* Doctor of Civil Law; Associate Professor, Schulich School of Law, Dalhousie University. This work was first presented at the Emerging Scholars Workshop in Law, Animals & Society hosted by the Animals & Society Research Initiative at the University of Victoria and supported by the Brooks Institute for Animal Rights Law & Policy. I am deeply indebted to Maneesha Deckha for organizing the workshop, inviting me to be a part of it, and providing invaluable feedback on the article, as well as Doug Kysar, Justin Marceau, and Delciana Winders for their thoughtful and detailed comments. I am also grateful to Jan Dutkiewicz and Troy Vetese for the opportunity to present this work at the Weatherhead Center for International Affairs and the Animal Law and Policy Program at Harvard Law School. The conversation that followed undoubtedly enriched this work. I am thankful for the excellent research and editorial assistance of Hartwell Millett, Ella Murphy, Kinnar Power, and Kelsey Warr and for comments on earlier drafts from Sarah Berger-Richardson, Elaine Brooks-Craig, Maureen Duffy, Angela Lee, Liam McHugh-Russell, and Katie Sykes. Finally, the comments of two anonymous reviewers and the editorial team at the Osgoode Hall Law Journal enhanced the quality of this work, which was supported by an Insight Development Grant from the Social Sciences and Humanities Research Council of Canada.

In truth, these laws, known as ag-gag (or agricultural gag) laws, aim to suppress animal rights activism and prevent undercover investigations of industrial animal agriculture. New in Canada, ag-gag legislation has been adopted and subsequently struck down in the United States as an unconstitutional limit on freedom of speech. This article suggests that Canadian ag-gag laws are likewise unconstitutional. They limit high-value constitutionally protected expression, interfere with the public's right to know how their food is produced and how the law fails to protect farmed animals, and cannot be justified under section 1 of the *Canadian Charter of Rights and Freedoms*.

Doctrinal in nature, this article fills a gap in Canadian legal scholarship on the constitutional dimensions of animal rights activism as well as the legality of limits on the activities of activists. It contributes to our understanding and interpretation of section 1 of the *Charter* and the permissible scope of government interference with fundamental freedoms. Its relevance also goes beyond the activities of animal rights activists. Public attention to animal agriculture and meat production is at an all-time high, not only with respect to the treatment of farmed animals, but also regarding working conditions for humans in light of the high incidence of COVID-19 infections in slaughterhouses in the United States and Canada, and the demonstrated connections between industrial farming, animal confinement, and the spread of zoonotic diseases. Moreover, the environmental degradation caused by intensive animal farming is garnering increased interest and awareness among members of the public and governments. Finally, the article makes a small, but much-needed intervention into the growing Canadian literature on agricultural exceptionalism and challenges the historic privileging of the agricultural industry by legislators and policymakers.

IT IS A TROUBLING TIME to be an animal rights activist in Canada. In 2019, Alberta amended its trespass legislation to create harsh penalties, including potential imprisonment, for trespassing onto private property and for obtaining permission to enter private property based on false pretences.¹ In 2020, the province prohibited obstruction of, or interference with, public infrastructure, including highways and agricultural operations.² In Ontario, since 2020,

-
1. Bill 27, *Trespass Statutes (Protecting Law-Abiding Property Owners) Amendment Act, 2019*, 1st Sess, 30th Leg, Alberta, 2019 (assented to 5 December 2019), SA 2019, c 23.
 2. See *Critical Infrastructure Defence Act*, SA 2020, c C-32.7, s 2(3) [CIDA].

it is likewise an offence to enter a place where animals are kept without prior authorization; there, too, entry based on false pretences is considered trespassing.³ Further, as in Alberta and, more recently, Manitoba,⁴ it is an offence in Ontario to “stop, hinder, obstruct or otherwise interfere with a motor vehicle transporting farm animals,”⁵ and to “interfere or interact with a farm animal being transported by a motor vehicle without the prior consent of the driver of the motor vehicle.”⁶ In effect, the trespass legislation, seemingly introduced in response to a number of instances where animal rights activists occupied spaces on industrial animal farms and similar animal exploitation businesses,⁷ makes it illegal to gain entry onto animal use facilities and to conduct undercover investigations of those facilities.⁸ Where the provisions related to transport are concerned, the legislation effectively prohibits demonstrations on public roads, a regular activity of members of the “vegan anti-speciest and animal-centric organization” called the Animal Save Movement,⁹ who protest outside of slaughterhouses in an effort to “bear witness” to animal suffering and to spread awareness of the violence of industrial animal farming.¹⁰

The laws in both Alberta and Ontario are said to be grounded in the general objective of protecting the food supply. Specifically, the statutes purport to respond to concerns about risks to the safety of farmers and their families from those that trespass onto their properties; risks to the safety of animal transporters when protestors interfere with moving vehicles; and risks to animals themselves in terms of food safety and biosecurity. The aim of the legislation will be further examined below but, for present purposes, the stated legislative objective illustrates its parallel with American laws known as “ag-gag”

or agricultural gag laws, which in their most recent iteration, involve the “creative use of trespass laws to suppress information about public harms.”¹¹ American ag-gag legislation, aimed at limiting whistleblowing in the animal agriculture industry, has taken many forms such as anti-trespass laws, anti-defamation laws, and prohibitions on recording and disseminating footage from industrial farms.¹² But all have had the same effect: “they limit speech critical of the agricultural industry.”¹³ Importantly, a number of American statutes—all of which contained prohibitions on entering an agricultural site based on a misrepresentation—have been invalidated as unconstitutional limits on the First Amendment right to free speech.¹⁴ As I suggest below, while the analysis differs, the same general reasoning underlies the evaluation of the Canadian statutes’ validity under the *Canadian Charter of Rights and Freedoms* (the “*Charter*”).¹⁵

In an earlier article, I suggested that Canadian ag-gag laws constitute a limit to the *Charter* right to freedom of expression.¹⁶ In this article, I make the case that the legislation is not a justifiable limit and is therefore of no force or effect, pursuant to section 52 of the *Constitution Act, 1982*.¹⁷ In other words, I sketch out the analytical approach by subjecting the legislation to the test established in *R. v. Oakes* for determining whether rights-infringing legislation may be justified in the interests of the collective.¹⁸ Specifically, my analysis focuses on the laws in force in Alberta and Ontario, the first two jurisdictions to adopt ag-gag legislation. However, the reasoning around section 1 should readily apply to parallel statutory developments, such as Manitoba’s law as it relates to transport, and any future legislation that might employ similar means to achieve the same objectives.¹⁹

19. See *e.g.* Daphné Cameron, “Antispécisme: un groupe de travail pour empêcher d’autres infractions,” *La Presse* (22 January 2020), online: <www.lapresse.ca/actualites/2020-01-22/antispecisme-un-groupe-de-travail-pour-empacher-d-autres-infractions> [perma.cc/V9VQ-C9Y6?type=image]. The article discusses the creation of a Quebec governmental task force to study how other Canadian provinces are dealing with on-farm trespassers.

Part I of this article first explains the legislative background and summarizes my earlier argument that the activities targeted by ag-gag legislation are a form of high-value, constitutionally protected speech. Next, in keeping with the section 1 framework, Part II examines the contextual factors that influence the rigour with which a court might approach the *Oakes* test. Part III then queries whether the legislation has a pressing and substantial objective and suggests that, while the government may struggle to meet its burden, the legislation would, nevertheless, likely pass this step. Part IV argues that the legislation is not rationally connected to the legislative objective. Part V shows that the provisions are not minimally impairing. Last, Part VI suggests that the legislation is not proportionate in its negative and positive impacts, independent of the legislative purpose.

This article is primarily doctrinal in nature. It draws on legislation, case law, Hansard, and relevant scholarship on constitutional rights interpretation. It is also partly comparative, drawing as it does on the body of American scholarship on ag-gag legislation and the First Amendment, and looking to the American case law striking down similar laws. As with my earlier work on Canadian ag-gag legislation, this article fills a gap in Canadian legal scholarship on the constitutional dimensions of animal rights activism as well as the legality of limits on the activities of activists. It should accordingly contribute to our understanding and interpretation of section 1 of the *Charter* and the permissible scope of government interference with fundamental freedoms. To that end, it might serve as a reminder that section 1 was conceived of as setting a high threshold to justify rights violations—as an exception to the guaranteed rights and freedoms contained in the *Charter*, and not the rule.

Further, the discussion of Alberta's *Critical Infrastructure Defence Act*, adopted in response to blockades and protests aimed at pipeline development,²⁰ coupled with the existence of similar legislative trends in other jurisdictions²¹

and the rise of climate protests,²² makes this work relevant to activism and the issues it responds to beyond animal rights. This article comes at a time when public attention to animal agriculture and meat production is at an all-time high, not only with respect to the treatment of farmed animals, but also regarding working conditions for humans in light of the high incidence of COVID-19 infections in slaughterhouses in the US and Canada,²³ and the demonstrated connections between industrial farming, animal confinement, and the spread of zoonotic diseases.²⁴ Indeed, it is no longer possible to turn a blind eye to the risks to human health associated with industrial animal farming and the relationships between intensive animal agriculture, the spread of zoonotic pathogens, and the increased microbial resistance that results from the regular, prophylactic use of antibiotics in food production.²⁵ Likewise, with respect to our natural environment, the connection between industrial animal farming and environmental harm is clear: “[T]he animal agriculture industrial complex is one of the major causes of human-induced global greenhouse gas emissions.”²⁶ Those concerned about our changing climate should be troubled by legislation that

seeks to shield the activities of an industry that is a significant contributor to drought, environmental degradation,²⁷ and global warming.²⁸

Finally, this article makes a small but needed contribution to the growing Canadian literature on agricultural exceptionalism, and the historic privileging of the agricultural industry by legislators and policymakers. In Canada, while some research examines the “special sociolegal place of agriculture within regimes governing...diverse policy fields,”²⁹ the economic and cultural importance of animal agriculture and the “broader [legislative] trend of insulating agriculture from the demands of a range of social justice imperatives” merit further attention.³⁰ While I do not explicitly engage in this discussion, the section 1 analysis draws on other examples of exceptional treatment of the agricultural industry by legislators and courts in the context of limiting the labour protections guaranteed by the *Charter*.³¹ Moreover, ag-gag legislation is, in essence, about immunizing a specific, self-regulating, private industry from public scrutiny so as to protect its economic viability.³²

See Bill C-206, *An Act to amend the Greenhouse Gas Pollution Pricing Act (qualifying farming fuel)*, 1st Sess, 43rd Parl, 2020 (as passed by the House of Commons 23 June 2021, reinstated following the 2021 election).

I. AG-GAG IN CANADA AND THE CONSTITUTIONAL PROTECTION OF ANIMAL RIGHTS ACTIVISM

This Part provides an overview of the legislation in question in Alberta and Ontario.³³ In setting out the legislative landscape, this part also summarizes the argument advanced in my previous work, that animal rights activism is constitutionally protected speech and that, by suppressing the activities of activists, ag-gag legislation constitutes a clear limit to section 2(b) of the *Charter*, the right to freedom of expression.

As explained, Alberta's Bill 27 created harsh penalties, including fines of up to ten thousand dollars for a first offence, twenty-five thousand dollars for a second, and up to two hundred thousand dollars for a corporation, as well as potential imprisonment for up to six months for trespassing onto private property.³⁴ The law also deems entry under false pretences to be trespassing.³⁵ Bill 27 became law in December 2019.³⁶ Importantly, while recent occupations by animal rights activists of industrial animal farms were a significant driver of Bill 27,³⁷ the trespass amendments were not limited to agricultural property. In fact, due to its broad wording and application, the Alberta amendments make it illegal to use false pretences to gain entry onto and, indirectly, conduct undercover investigations on *any private property* in the province, subjecting offenders to those severe penalties.

That said, Alberta's legislative developments in the form of trespass legislation also specifically target, and protect, animal agriculture. Alongside Bill 27, Alberta

33. Note, however, that Canadian ag-gag legislation is not limited to these jurisdictions. There is legislation effectively prohibiting roadside vigils and slaughterhouse protests in force in Manitoba. See Bill 62, *supra* note 4 (the wording of which mirrors the transport provisions of Ontario's law). Legislation has also been adopted in Prince Edward Island. See Bill No 120, *An Act to Amend the Animal Health Act*, 1st Sess, 66th Leg, PEI, 2020 (assented to 4 December 2020), RSPEI 2020, c 86; Bill No 124, *An Act to Amend the Animal Welfare Act*, 1st Sess, 66th Leg, PEI, 2020 (assented to 4 December 2020), RSPEI 2020, c 87. Prince Edward Island's legislation, while it indirectly limits animal rights activism on farms, may not be as constitutionally problematic from a *Charter* perspective as the statutes examined here, but it nevertheless singles out one industry for special protection. Combined, all these laws evince a growing legislative trend in Canada. I have chosen to focus on Alberta and Ontario as they were the first Canadian jurisdictions to adopt these kinds of laws and, in doing so, created serious offences with troubling consequences.

adopted a new regulation, the *Biosecurity Regulation*,³⁸ under its *Animal Health Act*.³⁹ Similar to Bill 27, the regulation prohibits unauthorized entry into a “biosecurity area” where livestock is or will be housed,⁴⁰ subject to even higher fines than general trespass—up to fifteen thousand dollars for a first offence, and up to thirty thousand dollars, or imprisonment for up to a year, or both imprisonment and a fine, for a second offence.⁴¹ Corporations, for their part, are liable to a fine of up to two hundred thousand dollars.⁴² The definition of “livestock” lists 29 different kinds of animals used for commercial purposes, including “beef cattle,” “dairy cattle,” “poultry,” “swine,” and fish kept pursuant to a “commercial fish culture licence.”⁴³ Like Bill 27, where a person obtains authorization to enter based on false pretences, that person is deemed to have entered without authorization.⁴⁴ Further, the regulation also indirectly prohibits, subject to the same penalties, interference with transport vehicles carrying animals, and interaction with the animals being transported.⁴⁵

Soon after the trespass prohibitions were adopted, in February 2020, the Alberta government introduced Bill 1, the *Critical Infrastructure Defence Act*.⁴⁶ That act purports to “reinforce public safety,” and to “strengthen penalties against those who would lawlessly trespass or jeopardize public safety by seeking to block critical public infrastructure, including roadways, railways, and other important infrastructure.”⁴⁷ Even broader than Bill 27, which is limited to private property, the *Critical Infrastructure Defence Act* prohibits the wilful obstruction, interruption, or interference with “any essential infrastructure,”⁴⁸ the definition of which includes highways and agricultural operations.⁴⁹ As explained, like the *Biosecurity Regulation*, the impact of the *Critical Infrastructure Defence Act*, where

animal rights activism is concerned, is to prohibit roadside vigils by members of the Animal Save Movement and similar groups. Bill 1 was adopted in June 2020.⁵⁰

Ontario has seen a similar legislative move. In December 2019, the Ontario government tabled Bill 156, the *Security from Trespass and Protecting Food Safety Act, 2020*.⁵¹ The *Act* makes it an offence to enter an “animal protection zone” without authorization and deems entry based on false pretences an offence.⁵² An “animal protection zone” is a designated area on a farm, an “animal processing facility,” or “prescribed premises,” where “animals may be kept or located.”⁵³ The trespass provisions are meant to apply to unauthorized entry onto farms by animal rights activists. Bill 156 also targets activism related to animals in transit: It is an offence to “stop, hinder, obstruct or otherwise interfere with a motor vehicle transporting farm animals,”⁵⁴ and to “interfere or interact with a farm animal being transported by a motor vehicle without the prior consent of the driver of the motor vehicle.”⁵⁵ Like in Alberta, the latter provision is clearly aimed at the activities of the Animal Save Movement, members of which regularly interact with animals on trucks by talking to them, petting them, and giving them water on hot days.⁵⁶ Bill 156 was adopted in June 2020.

While the provisions related to interfering with a transport vehicle went into effect upon royal assent, regulations were subsequently adopted to clarify the circumstances that amount to entry under false pretences.⁵⁷ Accordingly, a person who makes a false statement in order to gain access to a farm, animal processing facility, or prescribed premises commits an offence.⁵⁸ The same goes for individuals who make false statements in order to obtain employment.⁵⁹ However, the regulation contains two exceptions: one for “news media” journalists,⁶⁰ and one for what it terms “whistle-blowers.” According to the latter, where a person employed at a facility makes a false statement, consent to

enter “shall not be considered to have been obtained under false pretences” if, among other things, the person “obtain[s] information or evidence of harm to a farm animal...and...the person discloses the information or evidence [of harm] to a police officer or other authority as soon as practicable after obtaining the information or evidence.”⁶¹

At first glance, this provision seems to imply that animal rights activists who make false statements in order to gain employment on farms to document and disseminate animal abuse are not captured by the trespass or false pretences provision. But a closer read makes clear that only those individuals who actually document harm *and immediately turn that information over to law enforcement authorities* are exempted from the commission of an offence. This is what is known as a “quick report law,” or a “mandatory report law.”⁶² While quick report laws may seem to favour animal interests by ensuring that all abuse is reported right away, “in intent and effect these laws impede journalistic and other undercover investigations of food producing facilities” by making it impossible to document repeated and persistent patterns of animal abuse, thus undermining the point of going undercover at an animal use facility.⁶³ Moreover, the provision states that *unless and until the moment a person actually witnesses and documents animal abuse*, they are not covered by the exception. Thus, an individual who works at a facility but does not witness abuse right away is at risk of prosecution, until they do. Only once they actually document abuse could they meet the exception, and only provided they turn the information over to the authorities. The exception, in other words, is extremely narrow and does little to protect the work of those committed to exposing the systemic violence of industrial animal farming. With respect to journalists, they are only exempted if their actions do not cause “harm to a farm animal, harm with respect to food safety or harm to an individual.”⁶⁴ The term “harm to an individual” is defined to include “emotional or psychological injury, including undue stress”—in other words, the documented consequences of an individual being recorded abusing animals and, in some cases, fired as a result,⁶⁵ or, where an owner is concerned, of the negative publicity associated with an exposé. This, too, makes for a narrow exception.

65. See *ibid*, s 1; Ted Genoways, *The Chain: Farm, Factory, and the Fate of Our Food* (Harper Collins, 2014) at 135-43 (discussing the consequences of undercover investigations on individuals exposed as animal abusers).

As I have suggested, Canadian ag-gag laws constitute a clear limit to the *Charter* right to freedom of expression, as it has been interpreted by courts and scholars.⁶⁶ Prohibitions on demonstrations on public roads and sidewalks outside of slaughterhouses and limits on specific messages to gain access to a property are content-based restrictions and, accordingly, constitute *prima facie* limits to section 2(b) of the *Charter*.⁶⁷ Moreover, both activities relate to the underlying reasons why the *Charter* protects freedom of expression.⁶⁸ As Maneesha Deckha explains, the activities of the Animal Save Movement are an “exercise in truth telling.”⁶⁹ The same might be said of undercover investigations of industrial farm operations and the dissemination and viewing of video and photographic evidence of cruel farming practices. Indeed, the Canadian public has a right to know how its food is produced and to make consumer choices accordingly.⁷⁰ Whereas freedom of expression is about protecting “the individual’s freedom to communicate with others,”⁷¹ prohibiting the activities of those who aim to make public the violence of industrial animal farming cuts off a crucial and “extraordinarily effective” source of information, “critical to public discourse,” and with the potential to reveal “the unsavory practices of a wealthy and powerful industry to public scrutiny.”⁷²

Animal rights activism is also political in nature; Kathryn Gillespie writes that “the act of witnessing animals’ predicaments, and then sharing their stories, is a political act that resists the erasure of individual animal lives, suffering, and

deaths.”⁷³ Similarly, Timothy Pachirat suggests that uncovering animal suffering in hidden spaces like farms and slaughterhouses confronts viewers with “a politics of sight, defined as organized, concerted attempts to make visible what is hidden...in order to bring about social and political transformation.”⁷⁴ This kind of political activity is particularly salient in the context of industry self-regulation and a lack of government oversight where industrial animal agriculture in Canada is concerned.⁷⁵ Moreover, Canada has the reputation of having the worst agricultural animal transport rules in the developed world,⁷⁶ something that animal rights activists seek to expose to the broader public in order to stimulate legislative reform.⁷⁷ The activities of animal rights activists might also be seen as a form of individual self-fulfilment and human flourishing. As I have written, “sharing one’s deep moral convictions about animal use and exploitation, whether in the hopes of persuading others or simply as a means of personal fulfilment, surely promotes individual autonomy and human flourishing.”⁷⁸

Canadian ag-gag legislation targets not only the messages of animal rights activists, but also the means of creating that message. The prohibition on entry based on false pretences—or the fact that entry on false pretences is deemed trespass—limits protected speech, both in purpose and effect, as does the “quick report” provision of the Ontario regulation. As Alan K. Chen and Justin Marceau

78. Lazare, *supra* note 7 at 102.

suggest in their analysis of American ag-gag legislation, the provisions amount to a prohibition on telling a lie in order to gain access to an animal-use facility.⁷⁹ In other words, the legislation dictates permissible and impermissible speech, thus constituting a content-based restriction and a prima facie limit to section 2(b). The effect of the legislation is to prevent speech precedent to the type of expression carried out by undercover activists—that is, expression that seeks to tell the truth, engages political discourse, and promotes the self-fulfilment and human flourishing of activists.

Richard Moon explains that a meaningful commitment to freedom of expression depends on the existence of conditions that enable individuals to make “reasoned and independent judgments and have access to different opinions and reliable factual information.”⁸⁰ Limiting that access, as ag-gag legislation does, necessarily impacts the rights of both animal rights activists in their efforts to obtain and share information, and members of the general public who are prevented from accessing that information. In short, in both purpose and effect, Canadian ag-gag laws amount to an infringement of section 2(b) of the *Charter* by preventing members of the public from producing and “[receiving] and [assessing] ideas and information without interference from the state.”⁸¹ What remains to be determined is whether these limits are justifiable in the interests of a free and democratic society—that is, under section 1 of the *Charter*.

II. CONTEXTUALIZING AG-GAG AND THE SECTION 1 ANALYSIS

This part briefly introduces the section 1 analysis as developed by the courts and interpreted in the relevant literature and sets out the considerations that might inform a court’s inquiry into the justifiability of ag-gag legislation and its inherent limit on *Charter* rights. Before engaging in the balancing test established in *R. v. Oakes*,⁸² it is worth being explicit about what is really at stake when Canadian courts carry out the proportionality test mandated by section 1, and courts will often engage in this contextual inquiry before embarking on the *Oakes* analysis, which “clarified the...interpretive methodology for Charter

82. *Supra* note 18.

cases.”⁸³ Importantly, in addition to the analytical steps, *Oakes* established “the need to tailor judicial review to the unique context of each case.”⁸⁴ Context is the “touchstone of section 1.”⁸⁵

Rights adjudication and constitutional challenges do not take place in a vacuum; evaluating limits on expression typically entails a judgment about the value or harm inherent in a particular social practice.⁸⁶ Indeed, the rigour with which courts will examine a restriction on fundamental freedoms will often depend on a number of factors, including the nature of the right being limited.⁸⁷ The speech at issue here—speech by animal rights activists and advocates—may relate to what members of the public choose to buy at the grocery store. But it is not profit-driven speech, which lies “far from the ‘core’ of freedom of expression values,” and which may be easier to justify limiting.⁸⁸ Rather, despite the legislation’s purported aims, the background makes it clear that the message targeted is both political and informational in nature; as discussed above, animal rights activism can inform deeply personal decisions, such as what foods to eat, what to feed one’s children, and, ultimately, what ethical relationships with animals should look like.⁸⁹ In terms of informational value, the issues highlighted by activists might drive consumers to ask what kinds of animal use practices they want to support with their dollars. Where politics are concerned, the images revealed by activists might influence observers to think about how the law governs the treatment of farmed animals,⁹⁰ and how lawmakers might do better. The value of this speech to members of the public means that limits on it should be more difficult to justify. As the Supreme Court of Canada has

89. See Lazare, *supra* note 7.

90. In short, it does not. In Canada, the treatment of animals on farms is governed by non-binding codes of practice, created primarily by the members of the agriculture industry and relevant stakeholders, such as fast food restaurants and grocery chains. See Sankoff, *supra* note 75; National Farm Animal Care Council, “Coordinating a National Approach to Farm Animal Welfare in Canada” (2022), online: <nfac.ca> [perma.cc/DNR4-QALP].

repeatedly asserted,⁹¹ “political speech lies at the core of section 2(b)...and laws which restrict it do not warrant any deference.”⁹²

In a similar vein, the type of legislation under review also affects the court’s approach. Constitutional adjudication always involves some “form of interest-balancing,”⁹³ but where legislation aims to balance the competing interests of different segments of the population—here, animal rights activists, agricultural producers, and the general public—governments will typically benefit from more leeway in constitutional review.⁹⁴ In other words, the polycentric nature of the legislation could suggest a more flexible standard of justification and an easier onus on the government, which bears the burden of proving that legislative limits to rights are justified.⁹⁵ This would not, however, absolve the government of the need to produce clear evidence at each stage of the *Oakes* test. While the standard may be less demanding in non-criminal cases, *Oakes* set out a “stringent standard of justification” for limiting fundamental freedoms,⁹⁶ and made “*empirics* central to every stage of the *Oakes* test.”⁹⁷ As Justice McLachlin (as she then was) confirmed more than a decade later, justification under section 1 involves a “reasoned demonstration” that the impact of a law on *Charter* rights is proportionate to its objectives and means of achieving them.⁹⁸ “In short, [section] 1 is an exercise based on the facts of the law at issue and the proof offered of its justification, not on abstractions.”⁹⁹ Thus, section 1 involves an inquiry into the facts and the evidence proffered by the government in support of those facts. With respect to ag-gag legislation, it demands evidence of the reasonableness of limiting activism in the ways the governments of Alberta and Ontario have done.

Justification of *Charter* limits is a question of balance. Where freedom of expression is limited, the proportionality test under section 1 seeks to establish the line between engagement, or permissible speech, and manipulation, or the type

of speech that may be justifiably restricted.¹⁰⁰ The ultimate question for courts here is “whether the expression appeals to audience judgment or whether instead it aims to manipulate or influence the audience at a non-cognitive level,”¹⁰¹ the latter being the type of speech that the government may rightfully limit; the line between the two will be drawn in different places by different people.¹⁰² The remainder of this article is premised on the belief that the expression limited by Canadian ag-gag legislation does not rise to the level of manipulation, but rather, makes a meaningful contribution to public discourse on a matter of observable fact. Indeed, more than engagement or permissible speech, animal rights activism, as targeted by the legislation in question, is precisely the kind of speech that the *Charter* is meant to protect—unpopular perhaps, but crucial, in the eyes of the speakers, to truth-seeking, democratic discourse, and individual self-fulfilment and human flourishing.¹⁰³ In the final balance, it is doubtful that the objectives of ag-gag legislation, which the next part explores, outweigh these fundamental interests.

III. PROTECTING INDUSTRIAL ANIMAL AGRICULTURE AND LIMITING EXPRESSION ARE NOT PRESSING AND SUBSTANTIAL OBJECTIVES

The first step of the *Oakes* test is an assessment of whether the government has demonstrated that the limit to rights is “pressing and substantial.”¹⁰⁴ For Chief Justice Dickson, a pressing and substantial objective is one that “further[s] the values of the ‘free and democratic society’ referred to by the text of section 1.”¹⁰⁵ In the years following *Oakes*, the test was a stringent one, with rights limitations only being justifiable in exceptional situations.¹⁰⁶ With time, however, the standard was loosened; legislative objectives need only be “valid” or “sufficiently

100. See Moon, “Limits,” *supra* note 70 at 57.

101. *Ibid* at 60. important” to withstand section 1 scrutiny.¹⁰⁷ The current concept of a proper objective has been described as one that “is intended to realize societal objectives that are in line with the values of the state in general and are sensitive to the place of human rights in the general social arrangement.”¹⁰⁸ Thus, a law will meet the first requirement of *Oakes* where it aims to achieve objectives in line with social values.

Since *Oakes*, the debate around the need for a pressing and substantial objective may centre less on the standard of justification and more on the requirement of compelling evidence. Stated otherwise, given the empirical nature of the section 1 analysis, it is not enough for a government to merely assert, in the abstract, that legislation aims to achieve a particular aim or policy outcome. Rather, “[i]n determining whether the objective of the law is sufficiently important to be capable of overriding a guaranteed right, the court must examine the actual objective of the law.”¹⁰⁹ Indeed, “rights can only be justifiably limited in response to concrete, precise and real problems or harms whose existence can be demonstrated to the satisfaction of a court through the normal trial process.”¹¹⁰ The following paragraphs unpack the objectives of Canadian ag-gag legislation and suggest that where some of the stated objectives are concerned, there is little evidence supporting the purported harms it addresses. However, as legislation rarely fails at the first stage of the *Oakes* test,¹¹¹ the main purpose of this part is to identify the legislative objectives, as they inform the later parts of the analysis.

The speed with which Alberta’s Bill 27 (the trespass amendments) was tabled and adopted means that legislative intent may be difficult to uncover. But the legislative debates are nevertheless illuminating with respect to the objectives, two of which were made express by members of the legislative assembly. Bill 27 was introduced by the Honourable Doug Schweitzer, Minister of Justice, who made clear from the outset that the legislation aims, firstly, to protect property owners from a perceived increase in rural crime: “[W]e need to make sure that Albertans have the strongest possible property rights here in the province of Alberta. It’s integral to make sure that property rights are respected, that landowners can feel

safe in their homes knowing that law-abiding citizens are protected.”¹¹² Hansard suggests, moreover, that Bill 27 is about protecting a certain category of property owners: “It’s going to protect our farmers. It’s going to protect our homeowners across this province.”¹¹³ Second, although it applies to non-agricultural property as well, Bill 27 is expressly about protecting biosecurity and the safety of Alberta’s food system;¹¹⁴ the debates acknowledge that entry onto animal farms without the proper precautions could create a risk of transferring diseases, such as swine flu, between animals and humans and from farm to farm.¹¹⁵ Finally, while not an explicitly stated objective, an opposition MLA raised the idea that, in addition to property and biosecurity, Bill 27 might in fact be an “effort to...stifle dissent.”¹¹⁶ Before turning to the validity of each of these objectives, it is worth looking at the similar goals of Alberta’s Bill 1, as well as those of Ontario’s parallel legislation.

The lead-up to Bill 1, now the *Critical Infrastructure Defence Act*,¹¹⁷ made its objectives quite clear. The Bill appears to have been tabled in response to public protests, in the form of blockades of pipelines and railways, in support of Indigenous communities affected by proposed pipeline construction.¹¹⁸ Hansard confirms these goals: Referring to infrastructure being barricaded, and prosperity being impaired by “green zealots and eco radical thugs,” the legislation aims to “discourage the illegal protesters, who are scaring away investors, shutting down a large part of our economy, and potentially jeopardizing the public safety of the workers on rail lines and critical infrastructure projects.”¹¹⁹ The principal goal of Bill 1, in other words, is to “tak[e] action to defend our vital economic interests.”¹²⁰

Bill 156 in Ontario had similar objectives, both stated and unstated. The statute's original title—*An Act to protect Ontario's farms and farm animals from trespassers and other forms of interference and to prevent contamination of Ontario's food supply*—reveals its primary objectives: the protection of farmers and of the food supply. Hansard confirms these objectives, but also raises additional ones, such as balancing the security of farmers, who sometimes feel unsafe when activists trespass onto their properties, the food supply, and the “right of people to participate in legal protests.”¹²¹ Further, the legislative debates demonstrate that, like Bill 1 in Alberta, the Ontario statute aims to respond to industry concerns,¹²² and to protect economic interests in agriculture. At second reading, the Honourable Ernie Hardeman, Minister of Agriculture, Food, and Rural Affairs, stressed the importance of “Ontario's diverse agriculture sector [as] a significant economic driver.”¹²³ Accordingly, “[it's] important that we recognize the important role that agri-food businesses play in regional economic development, as they contribute to our broader economy.”¹²⁴ The legislation thus demonstrates the “government's commitment to protect the health and safety of [the] agri-food sector.”¹²⁵ As another majority MPP stated, “protecting agriculture is a non-partisan issue. It's something that we are all supportive of. We all support our farmers. We all support our agriculture industry.”¹²⁶

The legislative objectives apparent from the debates, however, do not end there. While majority MPPs emphasized the express objectives, opposition members pointed to a less obvious legislative goal—that of silencing animal rights activists, protesters, and undercover investigators. John Vanthof, the opposition Critic for Agriculture and Food, and Rural Development, suggested that the legislation is “trying to limit the impact of people who are totally opposed to animal agriculture,” as well as limiting investigative reporting,¹²⁷ and

127. Ontario Hansard (10 December 2019), *supra* note 121 at 6806.

that it “could be perceived as anti-whistleblower.”¹²⁸ Vanthof also pointed out that the “retroactive trespassing part”—that is, the fact that an individual who enters a facility under false pretences is deemed to have trespassed—“has nothing to do with biosecurity.”¹²⁹ Likewise, another opposition MPP highlighted the history of ag-gag legislation in the United States, where similar laws “designed to silence whistle-blowers who reveal animal abuses on industrial farms,”¹³⁰ and which “effectively cut off an important source of public information and a driver of policy change,”¹³¹ have been struck down as contrary to the First Amendment right to free speech.¹³² Another opposition member suggested that the purpose is political—that the government wants to “employ wedge issues to try and pit farmers against animal rights activists” and knows that the legislation will be challenged in court.¹³³ Thus, Canadian ag-gag legislation looks a lot like its American counterpart, the objectives of which have been unpacked in the relevant literature; in short, the history, effects, and context of the legislation “all evince a desire to target animal rights activists and sympathetic journalists and subject their political speech to disfavored treatment.”¹³⁴

The question, then, for each of these apparent purposes, is whether they accord with social values, and whether the government presents “evidence of the real, concrete harms of [the] prohibited speech.”¹³⁵ As discussed above, “governments can only justifiably limit constitutional rights to respond to real problems.”¹³⁶ Certainly, governments may protect property interests, as they do through both provincial and federal trespass legislation.¹³⁷ The inquiry here, however, is whether the legislation responds to a concrete problem at the level of privacy interests. The legislative debates suggest that farmers have repeatedly expressed concern and anxiety about unauthorized entry onto their properties, which house not only their barns, but also their homes.¹³⁸ Undoubtedly, human

safety is a legitimate government concern. But the American experience with similar statutes said to protect private property suggests that “the privacy intrusion narrative is oftentimes a canard.”¹³⁹ In the legislative committee hearings prior to the adoption of Bill 156,¹⁴⁰ an animal rights activist with experience trespassing onto farms to occupy barns and document animal suffering explained that activists do not threaten farmer safety:

Animal rights activists are only concerned about exposing the conditions that animals endure. Farmers’ homes are very rarely near any animal agriculture operation due to the strong stench of ammonia from the sheds....[W]e only enter the barns where the animals are. We do not need or want to see any human when we’re going into these places....[T]he farms are not next to any houses, and if the houses are nearby, then we choose not to go there. We are only interested in the animals....We are not harming anyone.¹⁴¹

This testimony supports the idea set out by Marceau and Chen that “[t]he privacy interests in the open areas of a large, commercial workplace are quite different than the privacy interests in one’s bathroom or living room.”¹⁴² Thus, while there may be societal consensus around the value of protecting the privacy of farmers and farm families, the evidence before the legislature appeared to undermine the suggestion that threats to farmer safety, and intrusions on their privacy interests are a “real, concrete [harm].”¹⁴³

Protecting biosecurity and, ultimately, the food system, may, for its part, constitute a pressing and substantial objective in the context of the section 1 analysis, even though, as with the privacy objective, the government may have difficulty meeting its evidentiary burden. Protecting biosecurity in the interests of a safe food system certainly aligns with societal objectives and state values. The lead-up to Canadian ag-gag legislation, however, potentially undercuts the pressing nature of the need for these biosecurity measures. In 2017, an Ontario Court of Justice judge rejected the Crown’s argument that the activities of the Animal Save Movement—bearing witness to animal suffering during transport and offering pigs water on hot days—pose any kind of risk to the animals,

143. Choudhry, *supra* note 83 at 526.

or to the food they are destined to become.¹⁴⁴ These, of course, are the activities targeted by the transport-related provisions in both provinces.¹⁴⁵ Likewise, the testimony of the same animal rights activist before the committee studying Ontario's legislation casts similar doubt on the risks to biosecurity by farm trespassers.¹⁴⁶ In her words, “[we] wear full biosecurity gear. We are not harming anyone.”¹⁴⁷ This testimony aligns with the observation, on the part of American feminist geographer Kathryn Gillespie, that “biosecurity [is] more regularly used as an excuse than a legitimate concern,”¹⁴⁸ and that “*biosecurity* is a complicated and ambiguous buzzword used in supporting the denial of access to spaces of agricultural production under the real or perceived guise of food safety and disease prevention.”¹⁴⁹ Indeed, Gillespie's conclusions about biosecurity were informed by the experience of seeing dairy farm workers themselves “arrive to work and complete their jobs with no protective gear or precautionary measures to prevent the spread of disease to the animals”¹⁵⁰—and this, despite repeatedly being denied access to farms in the name of biosecurity. Nevertheless, and despite these apparent weaknesses in the government's case, a court would likely accept the protection of biosecurity as a pressing and substantial objective. Indeed, the threshold for demonstrating the required objective is notoriously low.¹⁵¹ Further, as seen, when the government is mediating between the interests of different groups, it may be “afforded a margin of appreciation to form legitimate objectives.”¹⁵² Moreover, common sense dictates that protecting the food system from contaminants, regardless of the necessity or efficacy of those protections,

152. *Irwin Toy*, *supra* note 67 at 990.

is a worthwhile government objective.¹⁵³ For that reason, and based on the history of section 1, a court would likely find the purported protection of food safety is sufficient to pass this first stage of the test.

The same cannot, however, be said for the objective of prohibiting public protests, as Alberta's *Critical Infrastructure Defence Act*, Alberta's *Biosecurity Regulation*, and Ontario's *Security from Trespass Act* do, or for the apparent objective of stifling activism and information sharing—the effect of prohibiting entry under false pretences. Each of these activities—public protests, demonstrations, and dissemination of information about the brutal treatment of animals in the food system—is protected by the *Charter* under sections 2(b) and 2(c).¹⁵⁴ Peter Hogg wrote: “[A]n objective cannot provide the basis for [section] 1 justification if the objective is incompatible with the values entrenched by the Charter of Rights.”¹⁵⁵ As in the United States, “[p]reventing the public from obtaining this information precludes the dissemination of much needed safety-related information; this cannot be a compelling state interest.”¹⁵⁶ Canadian ag-gag legislation interferes with the public's right to information about the nature of industrial farming practices—information that enables participation in democratic life and is a means of truth-seeking and individual self-fulfilment. Even with a heightened level of deference to complex policymaking, limiting these activities, which go to the heart of the right to freedom of expression, is not a valid legislative objective.

Finally, in both Alberta and Ontario, lawmakers have been clear about the economic objectives of all three relevant statutes and the goal of protecting the agricultural industry in particular.¹⁵⁷ Agriculture is, uncontroversially, an important industry in Canada.¹⁵⁸ At the same time, the *Charter* has not been

153. For an example of “common sense” reasoning at section 1, see *RJR-MacDonald*, *supra* note 88 at para 158.

interpreted to protect economic rights,¹⁵⁹ including the right to earn a living¹⁶⁰ or the right to property.¹⁶¹ These limits to the scope of *Charter* protection must be taken into account when weighing such interests against the protection of a right as fundamental as freedom of expression. Indeed, Justice L'Heureux-Dubé, dissenting in *Dunmore v. Ontario (AG)* (“*Dunmore*”), rejected the invitation to find that “a policy geared to enhance the economic well-being of private enterprises” was sufficiently important to meet the first step of the *Oakes* test.¹⁶² In the same decision, however, the majority reasoned that “the protection of the family farm is a pressing enough objective to warrant the infringement of [section] 2(d) of the *Charter*.”¹⁶³ More generally, the fact that “agriculture occupies a volatile and highly competitive part of the private sector economy [and] that it experiences disproportionately thin profit margins” made its protection a pressing and substantial reason to limit *Charter* rights.¹⁶⁴ This approach aligns with the historic privileging of industrial agriculture insofar as it garners exceptional treatment in the form of regulatory carve-outs where things like worker and animal protections are concerned.¹⁶⁵

Still, it is worth highlighting that decisions from the Supreme Court of Canada validating the economic interests of private actors, or industry, as a pressing and substantial legislative objective are sparse, and seemingly limited to the labour context where associational rights under section 2(d) might conflict with the economic interests of private employers. Whether those interests should in fact constitute a justifiable reason to limit rights remains unsettled, with some authors suggesting they should not. Steven Barrett and Benjamin Oliphant write that “courts should be wary of succumbing to the temptation to justify limitations on strike action on the basis of economic harm or inconvenience.”¹⁶⁶ And, beyond the labour context, “[w]hile the protection of the rights or freedoms of third

parties may in some circumstances constitute a pressing and substantial objective for the limitation on the exercise of *Charter* rights or freedoms, we would propose that mere inconvenience or economic disruption rarely will.”¹⁶⁷ Moreover, in *Dunmore*, while it acknowledged the erosion of “family farms” as typical of Ontario agriculture, the majority’s reasoning on section 1 applied to these smaller farms and their “unique and non-commercial way of life,” and not to “corporate farming and agribusiness.”¹⁶⁸

Today, large corporate agri-business is quickly replacing the traditional family farm in Canada with so-called “intensive livestock operations,”¹⁶⁹ similar to the well-known and problematic “concentrated animal feedlot operations,” or CAFOs in the United States.¹⁷⁰ In recent years, researchers documented the “increasing concentration of power and resources in the hands of agribusiness firms and financial interests [and] the marginalization of small farmers” as two of the “dominant trends in the corporate food regime” in Canada.¹⁷¹ And, almost two decades ago, others observed that the North American “livestock industry, particularly the swine industry, has undergone dramatic concentration in the past twenty years.”¹⁷² It seems clear that the bucolic family farm envisioned by the Court is becoming a relic of the past; it is not what legislators seem to want to protect in the guise of ag-gag legislation. The major economic interests that motivate Canadian ag-gag legislation, the apparent distinction between family farms and industrial agribusiness, and the uncertainty around the pressing and substantial nature of economic interests as a general matter should in fact lead a court to reason differently than in *Dunmore* on the question of pressing and substantial objective.

167. *Ibid* at 229.

Nevertheless, the rarity with which laws are struck down based on the absence of a valid objective, combined with the high level of deference granted to governments at this first stage of the *Oakes* test, mean that the legislation would likely pass this step. It is therefore important to be clear about the precise objective that will ground the remainder of the analysis. The preceding paragraphs set out the legislative objectives of ag-gag legislation generally, but the section 1 test asks courts to evaluate specific rights-infringing provisions where that is the case.¹⁷³ The focus here, then, should be on the limits to expression inherent in the prohibitions on entry under false pretences, which purportedly aim to prevent the introduction of biosecurity hazards by trespassers and to protect private property and farmer safety. For their part, the prohibitions on interfering with animals in transport seek to prevent the introduction of contaminants in the food supply. The latter prohibitions, which amount to banning public protests, also aim to protect the industry more broadly. Assuming that protecting farmers, the agriculture industry, and the safety of the food system are in fact pressing and substantial objectives, the next question is whether the limits to section 2(b) are rationally connected to these objectives.

IV. THE LEGISLATION IS NOT RATIONALLY CONNECTED TO THE LEGISLATIVE OBJECTIVE

The requirement for a rational connection between the offending measure and the legislative objective forms the first part of the proportionality stage of the *Oakes* test. The question here is whether “the restrictive measure is effective in advancing its pressing and substantial purpose.”¹⁷⁴ As the Court described the question in *Oakes* itself, the impugned measure “must be carefully designed to achieve the objective in question. [It] must not be arbitrary, unfair or based on irrational considerations.”¹⁷⁵ As with the requirement for a pressing and substantial objective, few laws have been invalidated based on the absence of

174. Moon, “Limits,” *supra* note 70 at 50.

175. *Supra* note 18 at 139.

a rational connection.¹⁷⁶ But, as Hogg observed, it does happen.¹⁷⁷ In *Ford v. Quebec (AG)*,¹⁷⁸

[t]he Court held that while the evidentiary record was sufficient to demonstrate the importance of the government's objective [the survival of the French language], there was a complete absence of evidence on the critical question of whether "the requirement of the use of French only is either necessary for the achievement of the legislative objective or proportionate to it."¹⁷⁹

The remainder of this part suggests that where Canadian ag-gag legislation is concerned, there is likewise little evidence that the limits on expression are rationally connected to the legislative objectives identified above, or at least to those likely to be accepted as valid by a court.

As seen, there are several objectives being pursued by different parts of the legislation. The prohibitions on entry onto a property or biosecurity area (in Alberta) and an agricultural facility (in Ontario) aim to prevent the introduction of biosecurity hazards into the food system by trespassers and to protect private property and farmer safety. The difficulty here is that trespassers do not typically enter properties on false pretences. Rather, they simply enter with no prior authorization, as per both the ordinary and legal meanings of trespass.¹⁸⁰ Indeed,

176. See Hogg, 2015, *supra* note 155 at 38-34.1.

177. See *ibid.* The legislation under review in *Oakes* itself failed to meet the rational connection requirement. See also *Greater Vancouver Transportation Authority v Canadian Federation of Students — British Columbia Component*, 2009 SCC 31; *Saskatchewan (Human Rights Commission) v Whatcott*, 2013 SCC 11.

178. [1988] 2 SCR 712 [*Ford*].

179. Choudhry, *supra* note 83 at 526, citing *Ford*, *supra* note 178 at 717.

180. *Oxford English Dictionary*, (Oxford University Press, 2020) sub verbo "trespass" ("enter someone's land or property without permission"); *Irwin Law Canadian Online Legal Dictionary*, (Irwin Law, 2020) sub verbo "trespass" ("to enter onto the lands of another, actionable without proof of injury" or "a term deriving from the ancient writ of trespass that provided a civil remedy for direct damage to person and property"), "trespass *ab initio*" ("a principle that deems a person who enters land as of right to be a trespasser from the moment of entry if they abuse or exceed their licence while on the property"). Pursuant to the latter definition, general trespass legislation may create a similar limit to speech by punishing entry onto a property where an individual "abuse[s] or [exceed[s] their license" (*ibid.*), in other words, abuses their permission to enter. The difference between this kind of limit on speech and that inherent in ag-gag legislation is the targeted nature of the ag-gag restriction and the fact that the legislation contains a content-based restriction—that is, it has the clear purpose of restricting a particular message—and accordingly constitutes a clear *prima facie* infringement of section 2(b). See *Irwin Toy*, *supra* note 67 at 974 ("If the government's purpose is to restrict the content of expression by singling out particular meanings that are not to be conveyed, it necessarily limits the guarantee of free expression"). In any event, as explained, the *Charter*-infringing effect of the prohibition on entry on false pretences is

as highlighted above in one activist's testimony to the Ontario legislative committee studying Bill 156,¹⁸¹ animal rights activists trespassing onto farms typically go out of their way to avoid encountering other people, in effect depriving themselves of the opportunity to claim they are entering on any pretence other than their activism. There is no connection, in other words, between the rights limitation—the prohibition on telling a lie in order to gain entry—and the stated objectives.

Thus, the limit on expression seems to be aimed at something else altogether—a situation where an individual, such as an investigative journalist or an animal rights advocate posing as an employee,¹⁸² may lie to gain entry onto a farm in order to document repeated animal abuses and disseminate their findings. Indeed, such undercover investigations have been at the root of some of the biggest, and most damaging, exposés of animal cruelty on industrial farms,¹⁸³ and the adoption of ag-gag legislation is often a response to this kind of damaging publicity. In Idaho, for example, ag-gag legislation was a direct response to an undercover investigation by Mercy For Animals, which revealed horrific cruelty on a dairy farm.¹⁸⁴ That law has since been struck down as a breach of the First Amendment protection of freedom of speech.¹⁸⁵ The issue at the level of rational connection, then, is the “complete absence of evidence” that these types of

not geared at, so-called, petty trespassers, but rather, at those who seek to gain regular entry to document ongoing and consistent cruel farming practices.

181. Ontario Hansard (8 June 2020), *supra* note 141 at G-625-26.

182. Recall that journalists are exempted from the false pretences provision in Ontario, but not in Alberta. See Bill 27, *supra* note 1. Even in Ontario, it is worth highlighting that journalists do not typically enter farms of their own accord, but rather, receive footage obtained through undercover tactics by animal rights organizations and advocates. See *e.g.* Chad Derrick, “Undercover Footage from Ontario Pig Farm Shows Alleged Abuse but New Laws May Ban Future Probes,” *CTV News* (28 November 2020), online (video): <ctvnews.ca/w5/undercover-footage-from-ontario-pig-farm-shows-alleged-abuse-but-new-laws-may-ban-future-probes-1.5207579> [perma.cc/GD6T-HZ35] (footage collected by Animal Justice and turned over to CTV); CTV Staff, “‘Horrible’ Abuse of Cows at BC Dairy Farm Caught on Video,” *CTV News* (9 June 2014), online (video): <ctvnews.ca/canada/horrific-abuse-of-cows-at-b-c-dairy-farm-caught-on-video-1.1860892> [perma.cc/Q48Q-MJ79] (footage collected by Mercy For Animals and turned over to CTV). This practice demonstrates the difficulties with drawing boundaries between so-called traditional journalism, whistleblowing, and advocacy, as well as the necessary connections between them.

183. For American examples, see Chen & Marceau, “High Value Lies,” *supra* note 72 at 1466. For a Canadian example, see Postmedia News, “Undercover Investigation Reveals Horrific Cruelty at B.C. Dairy Farm, SPCA Recommending Charges,” *National Post* (10 June 2014), online: <nationalpost.com/news/canada/undercover-investigation-reveals-horrific-cruelty-at-b-c-dairy-farm-sPCA-recommending-charges> [perma.cc/3FYB-B8CQ].

184. See Marceau, *supra* note 11.

185. See *Wasden*, *supra* note 14.

activities constitute a threat to biosecurity or farmer safety.¹⁸⁶ This absence of connection was precisely what motivated another American court to strike down similar legislation. Judge Gritzner of the United States District Court, Southern District of Iowa, reasoned:

Defendants have produced no evidence that the prohibitions [on entry under false pretences] are actually necessary to protect perceived harms to property and biosecurity....Defendants have made no record as to how biosecurity is threatened by a person making a false statement to get access to, or employment in, an agricultural production facility.¹⁸⁷

The idea, of course, is that an animal rights activist who obtains employment in order to document farm practices will be trained, like any other employee, and expected to adhere to biosecurity protocols.¹⁸⁸ Trespassers are distinct from those who enter on false pretences, and while they may or may not introduce contaminants onto farms—although there is little evidence that they do—that is irrelevant to the relationship between prohibiting entry on false pretences and the stated legislative objectives, which seem to have no connection at all.

Similarly, there is little evidence of any relationship between the prohibitions on interacting with animals in transport and the stated objective of protecting the food supply. As discussed with respect to the legislative goal of protecting food safety, the legal system has previously rejected, based on an absence of evidence, the suggestion that members of the Animal Save Movement, who protest on public roads and bear witness to the suffering of animals as they are trucked off to slaughter, pose any biosecurity hazards to the animals that they attempt to comfort and, in turn, to the food system.¹⁸⁹ In *R. v. Krajnc*, Anita Krajnc, the founder of the Animal Save Movement, was charged with the crime of mischief for giving water to pigs on a transport truck on a hot summer day, as Krajnc and fellow protestors regularly did.¹⁹⁰ At trial, the Crown suggested that Krajnc “gave ‘an unknown substance [or] possible contaminant’ to the pigs, thereby creating a risk that the slaughterhouse would refuse to take them.”¹⁹¹ The judge rejected this theory, based on an absence of evidence that either the truck driver or the slaughterhouse showed any actual concern about a possible contaminant:

186. Choudhry, *supra* note 83 at 526.

187. *Reynolds*, *supra* note 14 at 825.

188. See *Herbert*, *supra* note 14 at 1213.

189. See *Krajnc*, *supra* note 56.

190. See *ibid.*

191. *Ibid* at para 58.

[71] Crown counsel argued that Ms. Krajnc created a risk that the slaughterhouse would refuse the load on the basis that they might be contaminated. The farmer and the truck driver both testified that this possibility caused them very real concern.

[72] Again I find that this is completely contradicted by the evidence.

[73] Protesters had given water to pigs before. The driver was aware of this. The slaughterhouse was aware of this. Despite this, the slaughterhouse had *never* refused to accept a load of pigs for that reason.

[74] As I stated above they did not reject that particular load on that particular day.¹⁹²

A finding by one trial judge is not a conclusive statement on the evidentiary basis for Canadian ag-gag legislation. But it is telling that the only judicial pronouncement on the relationship between slaughterhouse protests and the risk of contaminating the food supply involves a categorical rejection of the purported connection. Justice Harris's reasoning in *R. v. Krajnc* seriously undermines the existence of the rational connection required of constitutionally justifiable rights infringements.

As discussed, all of the offending provisions, and ag-gag legislation generally, are related to the broader objective of protecting and supporting the agriculture industry. Assuming that protecting the economic interests of private actors constitutes a pressing and substantial reason to limit fundamental rights, which remains unclear, this objective poses further problems at the level of rational connection. As suggested in the legislative debates,¹⁹³ by MPPs studying Bill 156 at committee,¹⁹⁴ and by research out of the United States and Canada,¹⁹⁵ ag-gag legislation may do more harm than good to the reputation of industrial animal agriculture. Rather than protecting the industry, the removal of transparency inherent in ag-gag legislation, which shields the industry from public scrutiny, has been shown to erode public trust in farmers and to increase support for

192. *Ibid* at paras 66-74 [emphasis in original].

193. See Ontario Hansard (20 February 2020), *supra* note 133 at 7026.

194. Ontario Hansard (8 June 2020), *supra* note 141 at G-600.

195. See JA Robbins, DM Weary & MAG von Keyserlingk, "Ag-gag' Laws Increase Negative Perceptions of Farm Animal Welfare and Decrease Trust in Farmers" in Diana Elena Dumitras, Ionel Mugurel Jitea & Stef Aerts, eds, *Know Your Food: Food Ethics and Innovation* (Wageningen Academic, 2015) 297; JA Robbins et al, "Awareness of Ag-gag Laws Erodes Trust in Farmers and Increases Support for Animal Welfare Regulations" (2016) 61 Food Policy 121.

animal welfare.¹⁹⁶ Paradoxically, then, by undermining public confidence in animal agriculture, ag-gag legislation achieves the exact opposite of the legislative objective—instead of protecting, it risks harming the industry and the economic interests of farmers. In other words, it is entirely ineffective in advancing its purpose and accordingly does not meet the requirement that rights-limiting legislation be rationally connected to its objective.

V. THE LEGISLATION IS NOT MINIMALLY IMPAIRING

The test for minimal impairment, the second stage of proportionality, has been restated a number of times in the years since *Oakes*. In 2015, Hogg described it as the “requirement of least drastic means....The idea is that the law should impair the right no more than is necessary to accomplish the desired objective.”¹⁹⁷ In practice, however, courts do not typically look for the “least intrusive” measure, but rather, seek to ensure that the “challenged measure... only impair[s] Charter rights as little as is reasonably possible’ and [ask] whether there is some reasonable alternative scheme.”¹⁹⁸ Given that courts regularly defer to governments balancing different interests, the question here is often “whether it could be said that the government had a ‘reasonable basis’ for concluding that it had impaired the right as little as possible.”¹⁹⁹ That said, as highlighted above, where the speech being limited is political in nature, the degree of deference afforded by the court will be low.²⁰⁰ Importantly, given the rarity with which laws fail at the previous two steps, minimal impairment “has turned out to be the heart and soul of [section] 1 justification.”²⁰¹ Moreover, as with the other parts of the *Oakes* test, the evidence is paramount in determining whether the limits are among a range of reasonable options for the government to meet its desired objectives. The following paragraphs suggest that ag-gag legislation does not meet this standard and accordingly fails the minimal impairment test.

There are reasonable alternatives with lesser impacts on rights that would achieve the objectives of protecting biosecurity, farmer safety, and the overall integrity of the food system. In fact, it is possible to achieve each of these

196. See Ontario Hansard (20 February 2020), *supra* note 133 at 7026 (“A 2016 study from the UBC found that when the public learns of so-called ag gag laws, it erodes trust in the farmers and increases support for animal welfare regulations”).

197. Hogg, 2015, *supra* note 155 at 38-36.

198. Choudhry, *supra* note 83 at 507 [citations omitted].

199. *Ibid* at 511, citing *Irwin Toy*, *supra* note 67 at 994.

200. See Choudhry, *supra* note 83 at 515.

201. Hogg, 2015, *supra* note 155 at 38-36.

objectives without limiting freedom of expression at all, especially given the tenuous connection, demonstrated above, between the restriction on speech and the objectives. The legislation, in both Alberta and Ontario, increases existing penalties for trespassing onto private property or an agricultural facility, respectively, and prohibits entry on false pretences by deeming it a trespass. The penalties (fines, jail, or both in Alberta and fines in Ontario), and the legislation more generally, are meant to dissuade activists from trespassing onto farms and occupying animal enclosures in order to achieve the broader objectives.²⁰² As set out already, however, it is not clear how the prohibition on entry under false pretences relates to these objectives. It stands to reason, then, that these objectives can be achieved without limiting expression. Indeed, the most efficient way to dissuade trespassing in order to promote biosecurity and farmer safety seems to be by prohibiting trespassing. And while it is not for courts to impose what they view as the best solution to a particular policy problem,²⁰³ it is incumbent on them to hold governments to account when legislation limits rights unnecessarily. Here, prohibiting trespass alone, without restricting expression, would achieve the legislative goal and would limit freedom of expression less than the false pretences provisions. Accordingly, these provisions limit rights more than necessary and thus fail the minimal impairment test.

The protection of biosecurity can also be achieved through less impairing measures that do not limit high-value speech. For example, at the federal level, Bill C-205,²⁰⁴ which died on the order table when the 2021 election was called, would have amended the federal *Health of Animals Act* so as to prohibit the introduction of a “disease or toxic substance” into a place where animals are kept.²⁰⁵ In other words, the amended legislation would protect against biosecurity

202. See Alberta Hansard (25 November 2019), *supra* note 115 at 2523-24; Ontario Hansard (10 December 2019), *supra* note 121 at 6801.

203. See *RJR-MacDonald*, *supra* note 88 at para 160 (“If the law falls within a range of reasonable alternatives, the courts will not find it overbroad merely because they can conceive of an alternative which might better tailor objective to infringement”); *Hutterian Brethren*, *supra* note 173 at para 54.

204. *An Act to amend the Health of Animals Act*, 1st Sess, 43rd Parl, 2020.

205. *Ibid*, s 1. Interestingly, Bill C-205 was originally aimed only at people without lawful authority to be on a farm (*i.e.*, trespassers), and prohibited the introduction of contaminants only by that category of individuals. At Second Reading, the Bill was amended by the Standing Committee on Agriculture and Agri-Food to apply to any individual who introduces a risk of disease to animals, in recognition of evidence that trespassers (*i.e.*, animal rights activists) have never been responsible for a disease outbreak, and that outbreaks are far more likely to result from industry practices. See House of Commons, Standing Committee on Agriculture and Agri-Food, 2nd Sess, 43rd Parl, No 40 (17 June 2021). Again, in the interests of transparency, I participated in this process as well.

threats by limiting exposure to contaminants and not by limiting speech. Surely, this bill demonstrates the existence of alternative means of achieving the principal legislative objective of ag-gag legislation that are less harmful to fundamental freedoms.²⁰⁶

It is tempting to view the exceptions for journalists and employee whistleblowers in Ontario's regulation as a means of narrowing the restriction on expression so that the law only impairs rights minimally.²⁰⁷ Recall that where an employee of an animal use facility gained entry to that facility based on false pretences, they are not deemed to have trespassed, provided they document harm to an animal and immediately turn it over to authorities.²⁰⁸ As explained, this obligation, or quick report requirement, by preventing the documentation of systemic and repeated patterns of abuse, undermines the reason for going undercover on a farm. As for journalists, they are exempt only if they do not cause harm to an animal, to food safety, or to an individual.²⁰⁹ But the term "harm to an individual" is defined to include "emotional or psychological injury, including undue stress."²¹⁰ It is difficult to imagine the negative press that results from an exposé disclosing animal mistreatment not causing some kind of psychological injury or stress to the individuals involved. Further, the regular work of industrial animal agriculture necessarily harms—and, where meat is concerned, kills—animals. Thus, the exceptions, limited as they are, do little to minimize the rights infringements inherent in Ontario's law.

Finally, Ontario's legislation is extremely broad in application. The regulation defines farm animal, with whom individuals are prohibited from interacting,²¹¹ as animals bred for a number of purposes including "[t]o propel vehicles" (e.g., carriage horses); "[t]o be ridden for pleasure" (e.g., horses ridden recreationally); "[t]o be shown publicly" (e.g., at a petting zoo); and "[t]o undertake competitions" (e.g., race horses).²¹² None of these activities forms part of the food system. In characterizing the places these kinds of animals are kept as those where trespassing risks compromising biosecurity and food safety, the legislation overreaches or impairs rights more than is necessary. A law genuinely

206. This is not an endorsement of the policy rationale for Bill C-205, which, based on the relevant debates and the Bill's original form, was clearly aimed at restricting animal rights activism. It is merely an example of a less impairing way of achieving a similar objective.

207. See Reg 701/20, *supra* note 57, ss 11, 12.

208. *Ibid*, s 12.

209. *Ibid*, s 11(1)(a).

aimed at protecting farmer safety and the food system would stop at the borders of personal property and food production and would limit speech only as much as necessary to achieve those objectives. The real possibility of less impairing measures thus makes clear that both Ontario's and Alberta's legislation fails the minimal impairment stage of the *Oakes* test. This failure, either alone or in conjunction with the absence of a rational connection, is enough for a court to declare the legislation of no force or effect. But in the interests of being comprehensive, the following part will briefly weigh the effects of the legislation.

VI. THE LEGISLATION IS NOT PROPORTIONATE IN ITS EFFECTS

The final stage of the *Oakes* test asks “whether the Charter infringement is too high a price to pay for the benefit of the law.”²¹³ Here, the positive and negative impacts of an impugned measure are weighed and the requirement of proportionality is met when the positive effects outweigh the negative. While courts have varied in their emphasis on this part of the analysis and some scholars have questioned its utility,²¹⁴ a majority of the Supreme Court of Canada has emphasized its importance. In *Alberta v. Hutterian Brethren of Wilson Colony*, Chief Justice McLachlin not only confirmed that the proportionality of effects test is integral to section 1, but also clarified the rationale of the analysis, as well as the meaning of the salutary and deleterious effects to be balanced. Accordingly, whereas the earlier stages of the *Oakes* test—pressing and substantial objective, rational connection, and minimal impairment—“are anchored in an assessment of the law’s purpose,”²¹⁵ the fourth stage takes full account of the “severity of the deleterious effects of a measure on individuals or groups.”²¹⁶ In other words, as it examines the impacts of legislation on their own, and not in connection with the legislative objective, the proportionality of effects test involves a more subjective assessment than the preceding inquiries.

Salutary effects are straightforward; they are the beneficial effects of the legislation in question. As Hogg suggested, they will typically align with the legislative objective, already accepted as pressing and substantial.²¹⁷ With respect to Canadian ag-gag laws, then, the benefits would, assuming these objectives

213. Hogg, 2015, *supra* note 155 at 38-43.

214. For the idea that this part of the test is unnecessary and “redundant,” see *ibid* at 38-44.

were accepted by a court, align with the goals of protecting the safety of farmers and their property, and guarding against the introduction of biosecurity threats to the food system by trespassers and activists outside of slaughterhouses.

Deleterious effects are less clear cut and, as with much analysis under the *Charter*, vary according to the case and the seriousness of the limit in question. Referring to a restriction on religious freedom, Chief Justice McLachlin wrote that “[t]here is no magic barometer to measure the seriousness of a particular limit” and that seriousness will depend on the nature of the practice.²¹⁸ The same, of course, might be said about freedom of expression, with the effect that limits to political speech—that is, the type of expression limited by ag-gag laws—should be viewed as particularly severe. Indeed, where constitutional protections are concerned, “no lie is more valuable than the lie that enables important speech on issues of public concern.”²¹⁹ The negative effects of Canadian ag-gag laws, in other words, are considerable.

Chief Justice McLachlin further suggested that the evaluation of a law’s deleterious effects will depend on its impacts “in terms of *Charter* values, such as liberty, human dignity, equality, autonomy, and the enhancement of democracy.”²²⁰ As seen, ag-gag laws constitute a restriction on political speech—that is, speech meant to enhance democracy. Moreover, for many animal rights activists, their commitment to their cause may be comparable to religious or conscientious beliefs,²²¹ such that limits on their ability to manifest their beliefs through activism constitute an affront to their liberty and dignity. Where ag-gag laws are in force, animal rights activists have a choice between getting their message out and facing possible penalties, on the one hand, or remaining silent

See Harold A Herzog Jr, “The Movement is My Life’: The Psychology of Animal Rights Activism” (1993) 49 *J Soc Issues* 103; Donna D Page, “Veganism and Sincerely Held ‘Religious’ Beliefs in the Workplace: No Protection without Definition” (2005) 7 *U Pa J Lab & Employment L* 363; Bruce Friedrich, “The Church of Animal Liberation: Animal Rights as ‘Religion’ under the Free Exercise Clause” (2014) 21 *Animal L* 65. *Contra* Jan Dutkiewicz & Jonathan Dickstein, “The Ism in Veganism: The Case for a Minimal Practice-based Definition” (2021) 6 *Food Ethics* 1. There is a need for further research on the connection between freedom of conscience and religion as interpreted in Canada and animal rights activism, and the related question of whether Canadian ag-gag laws constitute a restriction on the section 2(a) *Charter* guarantee of freedom of conscience, as something distinct from religious freedom. For present purposes, however, there is literature suggesting that limits on the right to participate in animal rights activism and to express one’s ethical and political commitments regarding animals do impact the liberty and dignity of those who espouse these commitments.

in the face of the unspeakable violence that animals experience on industrial farms, in transport, and in slaughter, on the other.²²² This is not a “meaningful choice.”²²³ Instead, as Justice LeBel reasoned, dissenting in *Hutterian Brethren*, “When significant sacrifices have to be made to [exercise constitutional freedoms] in the face of a state imposed burden, the choice to [do so] is no longer uncoerced.”²²⁴ Add to this the idea that undercover investigations and slaughterhouse protests are some of the only ways to bring to light the suffering of farmed animals and the weight of the negative impacts of ag-gag legislation becomes very clear. Proportionality of effects is a subjective inquiry. But surely, the absence of a meaningful choice, combined with restrictions on political speech and the related impacts on activists’ liberty and dignity, outweigh any salutary effects of Canadian ag-gag legislation.

VII. CONCLUSION

This article completes the argument that Canadian ag-gag legislation, recently adopted in a number of Canadian jurisdictions, constitutes a restriction on the constitutional right to freedom of expression that cannot be justified under section 1 of the *Charter*. After reviewing the ways that prohibitions on entry under false pretences and interference with motor vehicles transporting farmed animals limit high-value political speech—the kind of speech that lies at the heart of the guarantee—the article sets out the challenges that governments might face in attempting to justify the restrictions under the section 1 *Oakes* test. This is not a novel story, but one that has already played out south of the border. American ag-gag legislation dates to the early 1990s and has taken many forms—from rarely-used food libel laws, also known as “agricultural disparagement statutes,” to prohibitions on non-consensual recording on farms, and prohibitions on entry under false pretences,²²⁵ similar to those that I have scrutinized here. Indeed, where ag-gag laws are concerned, legislators seem influenced by cross-border policies in both directions. Where Canadian trespass laws originated in the United States,

222. On the appropriateness of using the word “violence” to describe the regular practices of industrial farming, see Gillespie, #1389, *supra* note 27 at 21 (describing how “violence against certain lives and bodies can become so normalized that it is not viewed as violence at all”).

223. See *Hutterian Brethren*, *supra* note 173 at para 163, LeBel J, dissenting.

the transport-related provisions in Alberta, Ontario, and Manitoba have now been exported to Iowa as well.²²⁶

As discussed above and elsewhere,²²⁷ all of these laws in both Canada and the United States were drafted in response to the activities of undercover journalists, whistleblowers, and animal rights activists who have made visible what the corporate animal agriculture industry wishes to hide.²²⁸ Moreover, in the United States, many of these statutes—particularly those that mirror the ones at issue here—have been ruled unconstitutional for their interference with the First Amendment right to free speech. Canadian ag-gag legislation, then, raises the same contest of values between the goal of protecting a billion-dollar industry through secrecy and concealment on the one hand, and the pursuit of truth and information about important subjects of public debate on the other. While the legal approach may differ in Canada given that courts tend to tolerate greater intrusions on free expression,²²⁹ my analysis suggests that the same interests that prevailed in the United States should triumph here as well. Indeed, information about how animals in the food system are treated is no less important to the Canadian public than it is to Americans, and, as seen, the evidence connecting ag-gag legislation and its purported objectives is equally weak on both sides of the border.

While protecting both the safety of farmers and the food system may be valid legislative objectives, there is little evidence that these things are threatened by the kinds of animal rights activism the legislation aims to prevent. Moreover, it is an open question whether protecting the economic interests of industrial agriculture constitutes a pressing and substantial objective in line with the *Charter* jurisprudence; there are compelling reasons to conclude that the economic protection of a billion-dollar industry should not be permitted to trump the individual rights and freedoms guaranteed by the Constitution, particularly when the rights in question are fundamental to citizen engagement with, and participation in, democratic and political processes. At the level of rational connection, neither the history nor the evidence supports the relationship between the prohibited expression—entry onto farms and bearing

witness on public roads—and the mischief being targeted; activists take steps to avoid harming both humans and nonhuman animals. The legislation is also not minimally impairing; there are ways of achieving the stated objectives that do less harm to *Charter* freedoms. In terms of proportionality of effects, the final stage of the section 1 analysis, legislators behind Canadian ag-gag legislation have a difficult case to make. Ag-gag laws impact *Charter* values in serious ways. For some activists who have made an ethical commitment to call out and combat the incredible cruelty of industrial animal farming, the laws preclude a meaningful choice between carrying out their conscientious beliefs and being charged and potentially imprisoned (in Alberta) or fined. That absence of individual choice affects the dignity and autonomy of people committed to challenging and changing the ways that we, as a society, relate to nonhuman animals. These kinds of deleterious impacts will not be easily outweighed by the purported objectives of Canadian ag-gag legislation.

Analyzing rights infringements using the *Oakes* framework has become a routine part of constitutional adjudication and decision-making in Canada. But section 1 justification was not always understood as a habitual or standard practice. Indeed, “drafters of the Charter envisaged section 1 as a way of *occasionally* preserving the abilities of legislatures to determine the primacy of particular policies or values.”²³⁰ As Kent Roach has written, section 1 enables courts to examine “adverse effects of laws in *exceptional* cases.”²³¹ It does not empower governments to trample on the civil liberties guaranteed by the *Charter* in order to immunize from public scrutiny the hidden cruelty inherent in large-scale industrial animal farming. But in the years since its adoption in 1982, and especially since the *Oakes* test was set out, “the Court has become overwhelmingly deferential to governmental assertions about the importance and justification” of rights-infringing legislation,²³² at the level of the legislative objective²³³ and throughout the remainder of the analysis. In ag-gag legislation, courts have a clear and straightforward opportunity to re-establish the constitutional limits involved in policy-making that negatively affects high-value expression.

This article focuses on the difficulties involved in justifying Canadian ag-gag legislation’s impacts on the right to freedom of expression. But ag-gag laws provide an opportunity for other constitutional inquiries and contributions to

the literature on interpreting *Charter* protections and raise important questions about the privileged treatment of the agriculture industry in Canada. Future research will explore whether ag-gag laws also limit freedom of conscience insofar as an ethical commitment to nonviolent and respectful relationships with nonhuman animals might qualify as a comprehensive belief system grounded in secular morality and deserving of the protection of section 2(a) of the *Charter*. This is a particularly timely inquiry given parallel developments in the United Kingdom and legal proceedings currently underway in Canada.²³⁴ Moreover, as stated at the outset, there is a need for further critical inquiry into Canadian agricultural exceptionalism—the idea that, for a number of reasons, and as exemplified by ag-gag legislation, “regulators should treat agriculture as an exceptional sector.”²³⁵ Indeed, privileged protections for the industry appear to align with the increased concentration of the agri-food industry and the rise of “Intensive Livestock Operations” in Canada, both of which merit scrutiny given the demonstrated negative impacts of intensive animal farming on human rights, health and safety, nonhuman animal interests, and the climate.²³⁶ For present purposes, however, the freedom of expression and justification analyses are sufficient to raise significant red flags about both the constitutionality and the general wisdom of Canadian ag-gag legislation.
